[Summary](#)

Detail-oriented and motivated Full Stack Developer with expertise in the MERN stack and a strong foundation in Electronics and Communication. Skilled in building responsive web applications, optimizing code for performance, and enhancing user experience. Recently completed MERN stack development training at NxtWave CCBP, bringing hands-on experience in modern frontend and backend technologies. Known for strong problem-solving skills, a collaborative approach, and a passion for delivering efficient, user-centered solutions.

Mini Project Arduino Based Solar Tracking System

It will extract more solar power than normal solar set up by rotating according to the sun using LDRs

Final Project Multiple Object Detection Using Yolov3 model

Technologies used: Yolov3 Model, Image processing libraries, Java, Deep learning libraries for java. Project description: Object detection using Yolov3 is a project that involves using a deep learning model called Yolov3 to accurately detect and identify objects within images or video frames in real time. This project typically involves training the yolov3 model with labeled data sets, evaluating its performance, and deploying it to perform object detection tasks in various applications such as surveillance, autonomous vehicles, and more.
